<p>The portable point load tester is an instrument that can easily and compressive strength of rock. It's in accordance with ASTM D5731. Because of the top and fragment loading, the pressure of rock failure is lower than that of conventional presses; The sample does not need to be processed into a regular test piece, which is suitable for on-site measurement and is convenient for the determination of low-intensity rock. This is a simple scientific test tool with convenient, economical and rapid advantages. It can be used for rock mechanics test in coal mine, geology, hydraulics, transportation, construction and other projects.</p> <p>Specification:</p> <ol style="list-style-type: none"> 1.
